Download the drivers or software for Brother QL-500 (to run a working printer). P-touch.Q: Woocommerce get image source url to variable? I'm trying to make a nice woocommerce shop. I'm using a theme that has a customizer for woocommerce so I want to know if there is a hook that I can call to get the source URL of a specific image, so I can put it into the background-image style of the parent div where the image is located in. I've found a couple of suggestions to look at the wc_get_image_slug() hook but it is not working. Does anyone know of a woocommerce function I can just use in the loop to get the url? A: I figured it out after some experimentation. Here's the function: function get_image_slug_url(\$image_slug) { if (empty(\$image_slug)) return; if (strpos(\$image_slug, '/')!== FALSE) \$image_slug = substr(\$image_slug, strpos(\$image_slug, '/') + 1); return get_theme_mod('images_url'). '/' . \$image_slug; } So I can just add it to a place in the loop and it will find the correct value. It also works for the logo and favicon images. And there you are In a large bowl, combine the oats, oats, rice
